

Data Collection Measures

What output data would be valuable to collect/review for the HRT?

- Number of DV cases in county/city
- Number of DV homicides in county/city
- Number of lethality assessments administered by officers, and how this compares to the number of DV cases
- Number of crisis hotline calls in county/city
- Number of cases reviewed by HRT
- What outcome-based questions should be asked? What impact does the use of the lethality assessment and/or HRT have on victim safety, access to services, relationships with victims and between systems, flow of information, caseloads, and/or other factors identified by the Project Team?
- Who should be asked these questions? Crime victims, perpetrators, LEOs completing the lethality assessment, the HRT members? How will the Project Team ensure that the impact on marginalized communities is also measured?
- How often will the questions be asked, and results reviewed?
- How will the results be used?
- Who will review them?
